# Welcome to EdBlocks

Name _____

You already know Edison.
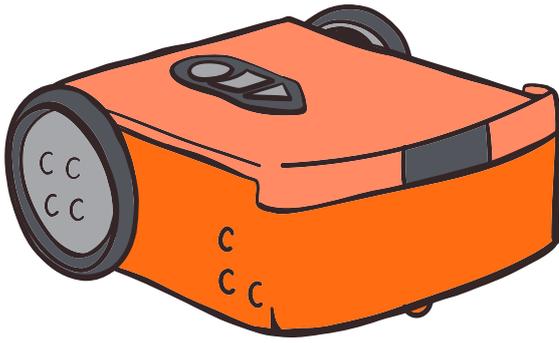

Now it is time to use EdBlocks and create your own programs.
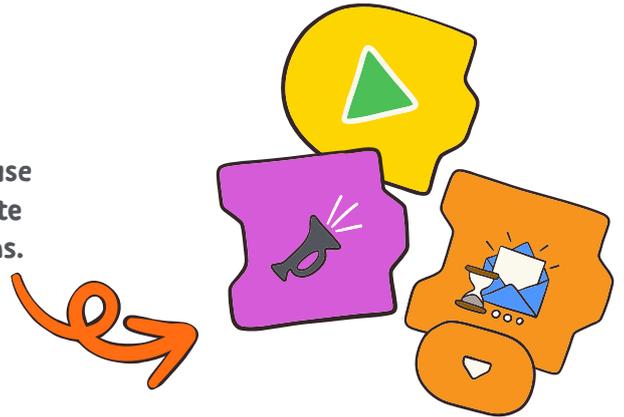

What is EdBlocks?

EdBlocks is a robot programming language we can use to program Edison.
You can program Edison to do different things using EdBlocks.

How does EdBlocks work?

Imagine you are baking a cake.
How would you know what to do?
When you read a cookbook, you follow each step **one by one.**

Start here — **and follow the steps one-by-one**

Edison also follows steps one by one, using EdBlocks.
Edison reads EdBlocks from left to right, starting at block one.
Edison then reads the EdBlocks one block at a time.

So, Edison can follow the same instructions, just in a different way.
